

Lookmefy Mobile Release Report

Version 1.0.3, Android versionCode 22, iOS build 23. Generated on 2026-09-11 IST from local workspace /Users/kratik/Desktop/yttry-main copy/Lookmefy-Unified-Backend.

Scope: Android APK/AAB artifacts, iOS .xcarchive, source metadata, verification results, and comparison against the immediately preceding Android release 1.0.2 versionCode 21.

Release Summary

Item	Value
User-facing fix	Android hardware back now returns to Home from a single non-home route instead of exiting the app. Existing route history still goes to the previous page.
Android artifacts	fit-look-APP/releases/lookmefy-1.0.3-build22/lookmefy-1.0.3-22.apk and lookmefy-1.0.3-22.aab
Android convenience copies	fit-look-APP/mobile/release/lookmefy-v1.0.3-vc22.apk and lookmefy-v1.0.3-vc22.aab
iOS artifact	fit-look-APP/mobile/release/lookmefy-ios-1.0.3-build23.xcarchive
Important signing caveat	Android artifacts are locally debug-signed. iOS archive is Apple Development signed. These are verified local build artifacts, not Play Store/TestFlight/App Store distribution artifacts. EAS cloud build requires explicit approval because it uploads source/configuration to Expo.

Binary-Verified Android Facts

Fact	APK / AAB value
Package	com.lookmefy.app
Version	versionName 1.0.3; versionCode 22
SDKs	minSdk 24; targetSdk 35; compileSdk 35
ABIs	arm64-v8a, armeabi-v7a, x86, x86_64
APK size	84,268,750 bytes
AAB size	63,073,671 bytes
APK SHA-256	fc265a6181a70908dcb9d0d79835581dfc07943a00794d711394084ac3994d9c
AAB SHA-256	3eaac6bf1d01ec3aa1b83c960d5c8fcdc713cd9efe1a48623e50e5fc204ca5ff
Android signing certificate SHA-256	fac61745dc0903786fb9ede62a962b399f7348f0bb6f899b8332667591033b9c
Signing identity	CN=Android Debug, OU=Android, O=Unknown, L=Unknown, ST=Unknown, C=US

Android Manifest Permissions

Binary inspection with aapt reported: INTERNET, READ_EXTERNAL_STORAGE, RECORD_AUDIO, SYSTEM_ALERT_WINDOW, VIBRATE, WRITE_EXTERNAL_STORAGE, com.android.vending.BILLING, FOREGROUND_SERVICE, FOREGROUND_SERVICE_MEDIA_PLAYBACK, CAMERA, ACCESS_NETWORK_STATE, and com.lookmefy.app.DYNAMIC_RECEIVER_NOT_EXPORTED_PERMISSION.

Binary-Verified iOS Facts

Fact	Value
Archive path	fit-look-APP/mobile/release/lookmefy-ios-1.0.3-build23.xcarchive
Archive size	143,664 KiB; 125 files
Bundle identifier	com.kratikdhote.lookmefy
Marketing version	1.0.3
Build number	23
Architecture	arm64

Minimum iOS	15.1
Signing identity	Apple Development: Ali Hussain Khan (JGXF4R39DG)
Team	LJ48CVC23W
Code signature CDHash	7ce28e38a1c0c8bc3924d4c18f83345d1c8edac1

Source Metadata Updated

File	Change
fit-look-APP/mobile/App.js	Back handler changed: single non-home route now navigates to home and consumes the Android hardware back event.
fit-look-APP/mobile/app.json	Expo version 1.0.3, Android versionCode 22, iOS buildNumber 23.
fit-look-APP/mobile/package.json and package-lock.json	Package version 1.0.3.
fit-look-APP/mobile/android/app/build.gradle	Native Android versionCode 22 and versionName 1.0.3.
fit-look-APP/mobile/ios/FitLook.xcodeproj/project.pbxproj	Native iOS CURRENT_PROJECT_VERSION 23 and MARKETING_VERSION 1.0.3.

Verification Commands And Results

Check	Result
Babel transform of App.js	Passed.
npm expo config --type public	Confirmed name Lookmefy, slug lookmefy, version 1.0.3, Android versionCode 22, iOS buildNumber 23.
Gradle Android build	Passed: :app:assembleRelease and :app:bundleRelease completed successfully.
APK verification	Passed: apksigner verified local APK and printed debug certificate SHA-256.
AAB verification	jarsigner verified signatures with expected self-signed debug certificate warnings.
iOS archive	Passed after freeing generated caches and building ios/FitLook.xcworkspace. Archive metadata confirms 1.0.3 build 23.

Comparison With Previous Release

Metric	Previous 1.0.2 / Android 21	Current 1.0.3 / Android 22
APK size	84,146,515 bytes	84,268,750 bytes
AAB size	63,014,966 bytes	63,073,671 bytes
APK SHA-256	78f4c6905b35e7e1973d57628a6ee2a938acc8be25224ac29cb4f1d3622d8392	fc265a6181a70908dcb9d0d79835581dfc07943a00794d711394084ac3994d9c
AAB SHA-256	d117f6757e56d502bb4bf4f10b5a75a78e40aa3b45b1fa965e69caef362dbb5d	3eaac6bf1d01ec3aa1b83c960d5c8fcdc713cd9efe1a48623e50e5fc204ca5ff
Signing	EAS-managed release/upload credentials; cert SHA-256 b010b9a7b007fc50cecaad78ebff2c5869bde4c14708f2ddadd97f8f63c73d83	Local debug signing; cert SHA-256 fac61745dc0903786fb9ede62a962b399f7348f0bb6f899b8332667591033b9c
Functional change	No hardware back fallback documented for single non-home route.	Android back fallback added for single non-home route.

Confidence And Limitations

Binary-verified facts are taken from the generated APK, AAB, and .xcarchive metadata. Source-history inferences are based on the local file edits and the release history baseline.

The repository root .gitignore ignores fit-look-APP/, so Git status does not expose the mobile source and release changes. The artifacts and metadata are present on disk, but Git cannot provide normal dirty-worktree traceability for those ignored files.

The EAS remote Android versionCode was set to 22 and confirmed. Starting EAS cloud builds was not performed because it requires explicit user approval to upload private app source/configuration to Expo. Local artifacts are therefore not store-ready replacements for the EAS-signed 1.0.2 release artifacts.

Next Steps For Store Distribution

For Play Store and TestFlight/App Store distribution, approve EAS cloud builds explicitly or provide the required Android upload keystore and iOS distribution signing/provisioning locally. Then regenerate store-signed Android artifacts and export/upload the iOS archive.
