

Lookmefy Release Difference Report

New build: Android 1.0.1 versionCode 20 and iOS 1.0.1 build 22

Generated on 2026-09-08 IST from local workspace /Users/kratik/Desktop/yttry-main copy/Lookmefy-Unified-Backend.

Executive Summary

- Android APK and AAB were rebuilt successfully as versionName 1.0.1 with versionCode 20.
- The previous Android baseline is versionName 1.0.1 with versionCode 19 from fit-look-APP/releases/lookmefy-1.0.1-build19/.
- The local iOS archive exists as version 1.0.1 build 22 and contains an arm64 app bundle.
- Important limitation: the iOS archive is unsigned and has no embedded provisioning profile, so it is not a TestFlight-ready upload package from this machine.
- Important limitation: the new Android artifacts are debug-signed because no approved release keystore was used in this run. They will not upgrade the old release-signed APK on devices.

Built Artifacts

Platform	Artifact	Size	SHA-256
Android APK new	fit-look-APP/releases/lookmefy-1.0.1-build20/lookmefy-1.0.1-20.apk	84,135,051 bytes	64491b9b0966ea8fa90e87f9a529ac75416e2de c91d495f98483b9b785ce758c
Android AAB new	fit-look-APP/releases/lookmefy-1.0.1-build20/lookmefy-1.0.1-20.aab	63,008,131 bytes	c2f661516fad61a544c70812e4195585bfff8d45 3feeb7b869b2eedf1216ef33
iOS archive new	fit-look-APP/mobile/release/lookmefy-ios-1.0.1-build22.xcarchive	140 MB directory	Directory archive; not hashed as a single file
Android APK old	fit-look-APP/releases/lookmefy-1.0.1-build19/lookmefy-1.0.1-19.apk	79,627,910 bytes	e52ec82afc449eb8380a5854f24d98a9a03e66e e5b56ba0b88fe47066677615b
Android AAB old	fit-look-APP/releases/lookmefy-1.0.1-build19/lookmefy-1.0.1-19.aab	58,726,559 bytes	c7249aac69a21106ebe91102ebac51b6304144 dcd0a63e22ea1848001dc2ffd1

Version And Build Metadata

Field	Old Android	New Android	New iOS
Display / marketing version	1.0.1	1.0.1	1.0.1
Build number / version code	19	20	22
Application id / bundle id	com.lookmefy.app	com.lookmefy.app	com.kratikdhote.lookmefy
Minimum OS / SDK	Android minSdk 24	Android minSdk 24	iOS 15.1 minimum deployment
Target SDK / architecture	targetSdk 36, compileSdk 36	targetSdk 35, compileSdk 35	arm64 archive

Binary-Verified Android Differences

Area	Old 1.0.1 vc19	New 1.0.1 vc20	Difference
Version code	19	20	Incremented by 1.
Version name	1.0.1	1.0.1	No display-version change.
APK size	79,627,910 bytes	84,135,051 bytes	New APK is +4,507,141 bytes.
AAB size	58,726,559 bytes	63,008,131 bytes	New AAB is +4,281,572 bytes.

Area	Old 1.0.1 vc19	New 1.0.1 vc20	Difference
SDK levels	min 24 / target 36 / compile 36	min 24 / target 35 / compile 35	Target and compile SDK are lower in the new local build because the project root SDK settings were restored.
Native ABIs	arm64-v8a, armeabi-v7a, x86, x86_64	arm64-v8a, armeabi-v7a, x86, x86_64	No ABI coverage change.
Signing certificate	FitLook release certificate SHA-256 5f6b3f0a...18bcb	Android Debug certificate SHA-256 fac61745...3b9c	Signer changed; not upgrade-compatible with old release-signed APK.
AAB integrity	unzip -t: no errors detected	unzip -t: no errors detected	Both bundles pass ZIP integrity verification.

Manifest Permission Comparison

Status	Permission
Unchanged	android.permission.INTERNET android.permission.READ_EXTERNAL_STORAGE android.permission.WRITE_EXTERNAL_STORAGE android.permission.FOREGROUND_SERVICE android.permission.FOREGROUND_SERVICE_MEDIA_PLAYBACK android.permission.CAMERA android.permission.ACCESS_NETWORK_STATE com.lookmefy.app.DYNAMIC_RECEIVER_NOT_EXPORTED_PERMISSION
Added in new build	android.permission.RECORD_AUDIO android.permission.SYSTEM_ALERT_WINDOW android.permission.VIBRATE com.android.vending.BILLING
Removed in new build	None

Interpretation

- RECORD_AUDIO adds microphone access and creates an implied android.hardware.microphone feature in the APK badging output.
- SYSTEM_ALERT_WINDOW and VIBRATE are present in the new manifest but were not present in the old APK.
- com.android.vending.BILLING appears in the new build, consistent with the Expo IAP dependency/plugin being present in the mobile project.
- The camera permission remains present in both releases.

iOS Archive Verification

Field	Verified value
Archive path	fit-look-APP/mobile/release/lookmefy-ios-1.0.1-build22.xcarchive
Archive name / scheme	FitLook / FitLook
Bundle identifier	com.kratikdhote.lookmefy
Version	1.0.1
Build	22
Architectures	arm64
Signing identity	Empty in archive Info.plist
Provisioning profile	No embedded.mobileprovision found
codesign result	code object is not signed at all
Keychain status	security find-identity found 0 valid code-signing identities

Because the archive is unsigned, it is suitable as a local build artifact record only. A TestFlight submission requires a signed archive or IPA produced with valid Apple signing credentials and provisioning.

Source And Build Configuration Notes

File	New release setting
fit-look-APP/mobile/app.json	expo.version 1.0.1; ios.buildNumber 22; android.versionCode 20
fit-look-APP/mobile/package.json	package version 1.0.1
fit-look-APP/mobile/package-lock.json	root package version 1.0.1
fit-look-APP/mobile/android/app/build.gradle	versionCode 20; versionName 1.0.1; release signing falls back to debug signing
fit-look-APP/mobile/ios/FitLook.xcodeproj/project.pbxproj	CURRENT_PROJECT_VERSION 22; MARKETING_VERSION 1.0.1

Confidence And Limitations

- Binary facts above come from aapt, apksigner, unzip integrity checks, plutil, codesign, file sizes, and SHA-256 hashes run against local artifacts.
- The top-level git status is clean, but fit-look-APP is ignored by this repository, so release file changes inside it are not reflected by git status.
- The earlier incorrect Android 1.0.2 artifact folder and copied Android keystore files were removed from this workspace as requested.
- The new Android artifact is not production-signed. Use the approved Play/App signing workflow before store upload or device upgrade testing against the old release.
- The iOS archive is not TestFlight-ready until it is signed and exported/submitted through Xcode, EAS, or Transporter with valid Apple credentials.

Release Readiness Checklist

Check	Result
Gradle assembleRelease	PASS
Gradle bundleRelease	PASS
APK badging version check	PASS: com.lookmefy.app / 1.0.1 / versionCode 20
APK signature verification	PASS cryptographically, but debug signer only
AAB ZIP integrity	PASS
iOS archive metadata	PASS: 1.0.1 build 22
iOS TestFlight readiness	BLOCKED: unsigned archive, no local signing identity

End of report.
