

Lookmefy Android release comparison

Previous 1.0.1 / code 24 vs new 1.0.2 / code 25 | 28 September 2026

Release result

Built a Lookmefy APK and AAB signed with the Play Console upload certificate for com.lookmefy.app. This corrects the key mismatch in the preceding local build. Skillomate remains a separate package and signing identity.

Binary-verified item	Code 24	Code 25
Package / version	com.lookmefy.app / 1.0.1	com.lookmefy.app / 1.0.2
APK bytes	83,822,286	83,700,771
AAB bytes	62,653,463	62,595,052
Upload SHA-1	5E:8F:16:06:....:F6:25 (debug)	4C:27:9B:A5:....:CB:75 (Play key)

Changes since code 24

- **Version and build configuration:** Updated Expo, package.json and native Android metadata to 1.0.2 / code 25. Switched EAS version source to local to avoid its stale remote code 22.
- **Signing fix:** Native release tasks require the original Lookmefy signing properties and reject a missing or nonmatching certificate. This prevents debug or unrelated keys from producing another local release bundle.
- **Release process:** Added a package, version, APK signature, AAB signature and ZIP-integrity pre-upload check plus release instructions. No user-facing feature change was intentionally made in this task.

Build and verification

- Local Gradle assembleRelease and bundleRelease completed. The copied release pair passed the pre-upload verifier, APK alignment, APK signature verification, and AAB JAR signature/ZIP integrity checks.
- APK manifest: minSdk 24, targetSdk 35, compileSdk 35. Native ABIs: arm64-v8a, armeabi-v7a, x86, x86_64. Permissions are unchanged from code 24: INTERNET, READ/WRITE_EXTERNAL_STORAGE, RECORD_AUDIO, SYSTEM_ALERT_WINDOW, VIBRATE, BILLING, FOREGROUND_SERVICE, FOREGROUND_SERVICE_MEDIA_PLAYBACK, CAMERA, ACCESS_NETWORK_STATE, and the app dynamic-receiver permission.
- Play upload certificate SHA-1: 4C:27:9B:A5:0B:3A:85:11:82:F5:DA:1B:8C:BB:B7:14:60:56:CB:75. A release task without local signing properties was also tested and failed before producing output.

Limits and remaining remote step

The remote Lookmefy EAS credential still has a different SHA-1. Remote Android release builds are blocked by the native signing guard until that EAS key is corrected. No Play Console upload or device smoke test was performed. The Lookmefy mobile source is ignored by the parent Git repository, so user-facing source changes since code 24 cannot be fully reconstructed from Git history.
