Lookmefy Android release

1.0.3 / versionCode 27 - signed local build - 15 October 2026

Status: Local APK and AAB only. No Play upload or publication. Google Play confirmation supplied by the user schedules the replacement upload key for 17 October 2026, 07:17 UTC / 12:47 IST. This activation has not been independently checked in the account.

Binary-verified identity and build configuration

Fact	Build 27
Package	com.lookmefy.app
Version	1.0.3 / 27
SDK: minimum / target / compile	24 / 36 / 36
Native ABIs	arm64-v8a, armeabi-v7a, x86, x86_64

Build configuration from source and build logs: Gradle 8.13 (official download SHA-256 checked), Java 17, Android build tools 36.0.0, Kotlin 2.1.20, NDK 27.1.12297006; release variant, Hermes and new architecture enabled, four ABIs, code minification and resource shrinking disabled. Production API: https://api.lookmefy.in/api. Source configuration is distinguished from the binary facts above.

Verification results

PASS: Gradle assembleRelease and bundleRelease; APK and AAB package/version inspection; APK apksigner verification; AAB jarsigner verification; expected replacement certificate on both outputs; ZIP CRC checks; Google bundletool validation and AAB binary manifest inspection; APK zipalign with 16 KB native page alignment. No physical-device smoke test or Play upload validation was performed.

The AAB signing certificate is self-signed and the JAR signature has no trusted timestamp. These expected certificate-chain/timestamp warnings do not replace the successful integrity and fingerprint checks.

Comparison with the immediately preceding recorded release

Baseline: the latest release-history entry is 1.0.2 / versionCode 25. Both baseline artifacts are present and were inspected directly. No release 26 is recorded or present; code 27 was explicitly requested, overriding the usual +1 convention. Version 1.0.3 follows the patch increment from the recorded baseline.

Binary fact	Build 25	Build 27
Version	1.0.2 / 25	1.0.3 / 27
Minimum SDK	24	24
Target / compile SDK	35 / 35	36 / 36
APK bytes	83700771	85605671
AAB bytes	62595052	67374260

```
Baseline certificate SHA-1: 4c279ba50b3a851182f5da1b8cbbb7146056cb75

Build 27 certificate SHA-1: e047a98f96b23a0fd32232759759603d5105b0eb
```

Signing changed from the missing original upload key to the EAS replacement submitted for reset. ABI sets: unchanged.

Manifest permissions - binary verified

android.permission.ACCESS_NETWORK_STATE

android.permission.CAMERA

android.permission.INTERNET

android.permission.READ_EXTERNAL_STORAGE

android.permission.RECORD_AUDIO

android.permission.SYSTEM_ALERT_WINDOW

android.permission.VIBRATE

android.permission.WRITE_EXTERNAL_STORAGE

com.android.vending.BILLING

com.lookmefy.app.DYNAMIC_RECEIVER_NOT_EXPORTED_PERMISSION

Added versus code 25: none. Removed: android.permission.FOREGROUND_SERVICE, android.permission.FOREGROUND_SERVICE_MEDIA_PLAYBACK.

User-facing changes and source-history inferences

No feature edits were intentionally made during this signing/build task. The existing mobile source is newer than the baseline: commits ae10f39 (9 October: try-on and home experience) and 87be623 (6 October: navigation and style rail) indicate UI changes. These commit descriptions are source-history evidence, not proof of the exact behavior differences between the two binaries. Functional behavior was not smoke-tested.

Technical changes and confidence limits

This task sets Android versionCode 27, retains versionName 1.0.3 across Expo, package metadata and Gradle, stores an ignored local EAS key backup, switches the signing guard and verification tool to the replacement certificate, and updates signing documentation. Android source and root repositories had dirty version/signing changes before this task; the nested repository also had iOS changes. Existing user changes were retained. Android native files are ignored in the nested Git repository, limiting exact source-to-baseline attribution.

Expo blockedPermissions configuration does not itself prove which permissions a native build includes. The manifest permission list on page 2 comes from the built AAB. Any listed microphone/storage permission remains present in this binary regardless of Expo configuration intent.

Private backup and release handling

Private key: fit-look-APP/mobile/credentials/android/keystore.jks. Credentials: fit-look-APP/mobile/credentials.json. Gradle signing properties: fit-look-APP/mobile/android/keystore.properties. Secret files have mode 0600 and private credential directories mode 0700; all are excluded from Git. No private material is included in this report. The public PEM matches the replacement certificate. Keep a separate secure backup outside this Mac.
