

Lookmefy Android 1.0.1 / versionCode 23 Re-verification Report

Generated 2026-10-01 IST for requested APK and AAB delivery. This report separates binary-verified facts from source-history inferences and records why a fresh local rebuild was blocked.

Deliverables

Artifact	Path	Size	SHA-256
APK	fit-look-APP/releases/lookmefy-1.0.1-build23/lookmefy-1.0.1-23.apk	83,871,438 bytes	19a6001f894b7690 5e5bbb825094342e 3cbcaae87ba9b08b 534bb8b1ea0a702c
AAB	fit-look-APP/releases/lookmefy-1.0.1-build23/lookmefy-1.0.1-23.aab	62,703,067 bytes	3753d042f6964cf5 b9fd10c4d38f5df5 83410df9a522a310 545458076a4a649d
Mobile APK copy	fit-look-APP/mobile/release/lookmefy-v1.0.1-vc23.apk	same bytes	19a6001f894b7690 5e5bbb825094342e 3cbcaae87ba9b08b 534bb8b1ea0a702c
Mobile AAB copy	fit-look-APP/mobile/release/lookmefy-v1.0.1-vc23.aab	same bytes	3753d042f6964cf5 b9fd10c4d38f5df5 83410df9a522a310 545458076a4a649d

Binary-verified Android facts

Fact	Verified value
Package	com.lookmefy.app
Application label	Lookmefy
versionName / versionCode	1.0.1 / 23
Minimum / target / compile SDK	24 / 35 / 35
Native ABIs	arm64-v8a, armeabi-v7a, x86, x86_64
APK signing schemes	Verified with APK Signature Scheme v2 and v3
APK signer DN	CN=Android Debug, OU=Android, O=Unknown, L=Unknown, ST=Unknown, C=US
Signer SHA-256	fac61745dc090378 6fb9ede62a962b39 9f7348f0bb6f899b 8332667591033b9c
Signer SHA-1	5e8f16062ea3cd2c4a0d547876baa6f38cabf625
ZIP alignment	zipalign -c -p 4 passed
AAB signature	jarsigner verified the bundle; warnings note a self-signed debug certificate and no timestamp

Manifest permissions

android.permission.INTERNET; android.permission.READ_EXTERNAL_STORAGE; android.permission.RECORD_AUDIO; android.permission.SYSTEM_ALERT_WINDOW; android.permission.VIBRATE; android.permission.WRITE_EXTERNAL_STORAGE; com.android.vending.BILLING; android.permission.FOREGROUND_SERVICE; android.permission.FOREGROUND_SERVICE_MEDIA_PLAYBACK; android.permission.CAMERA; android.permission.ACCESS_NETWORK_STATE; com.lookmefy.app.DYNAMIC_RECEIVER_NOT_EXPORTED_PERMISSION.

Build configuration and verification commands

Source metadata was aligned to versionName 1.0.1 and Android versionCode 23 in mobile/app.json, mobile/package.json, and mobile/android/app/build.gradle before attempting the build. The Gradle wrapper required an explicit JAVA_HOME because no system Java runtime was registered. The release build then failed during project evaluation because LOOKMEFY_KEYSTORE_PROPERTIES was not set, and the build script requires the Play upload key for release tasks.

Verification used aapt dump badging, apksigner verify --verbose --print-certs, jarsigner -verify -certs -verbose, zipalign -c -p 4, shasum -a 256, stat, unzip inspection of base/assets/app.config, and ABI listing from the AAB.

User-facing and technical changes

No new binary was produced on 2026-10-01 because the Play upload signing properties were unavailable. The delivered APK and AAB are the existing verified build-23 artifacts recorded on 2026-09-14. Binary inspection confirms the requested app identity and version values. Source metadata in the working tree now matches the requested Android release values for a future rebuild once signing credentials are supplied.

Source-history inference: the recorded build-23 history says this release intentionally set the semantic version to 1.0.1, used Android versionCode 23, kept iOS build 23, and changed launcher icon assets on both platforms. That statement comes from RELEASE_HISTORY.md, not from a fresh source diff.

Comparison with adjacent recorded releases

Release	Comparison
1.0.3 / Android 22	Build 23 changed semantic version to 1.0.1 and incremented Android versionCode from 22 to 23. Recorded APK hash starts fc265a61; AAB hash starts 3eaac6bf.
1.0.1 / Android 23	Requested artifacts. APK SHA-256 19a6001f...0a702c; AAB SHA-256 3753d042...4a649d. Binary facts verified in this report.
1.0.1 / Android 24	Build 24 kept versionName 1.0.1, incremented versionCode to 24, and restored the original Lookmefy icon per release history.
1.0.2 / Android 25	Latest recorded release uses a higher versionName/versionCode and Play upload signing SHA-1 4C:27:9B:A5:0B:3A:85:11:82:F5:DA:1B:8C:BB:B7:14:60:56:CB:75. Delivering code 23 is therefore an intentional out-of-sequence request.

Confidence limits

The root Git status reports fit-look-APP/ as ignored, so release artifacts and mobile source edits are not represented by root Git tracking. The requested build could not be freshly rebuilt because LOOKMEFY_KEYSTORE_PROPERTIES and the Play upload keystore were unavailable in this shell. The APK/AAB supplied here are binary-verified existing artifacts, not newly compiled outputs. The APK/AAB are debug-signed/self-signed and should not be treated as Play-upload-ready unless that is acceptable for the target workflow.

Conclusion

The requested Lookmefy Android APK and AAB for versionName 1.0.1 and versionCode 23 are present and verified at the paths listed above. They match the convenience copies in mobile/release by SHA-256. A fresh rebuild remains blocked until the Play upload signing properties are supplied.
